

Amendments to the Claims:

This listing of claims replaces all prior versions and listings of claims in the application:

Listing of Claims:

1. (Currently Amended) A method of handling quotes in an electronic market that, if entered, would lock or cross other quotes in the market comprises:

formatting the quote as a marketable limit order and routing the formatted order to a market participant whose quote was locked or crossed;

determining if the formatted order was filled by execution against the locked or crossed quote, wherein if the formatted order was not filled,

reformatting the formatted order as a displayable quote on the side of the market of the formatted order.

2. (Previously Presented) The method of claim 1 further comprising detecting if a market participant enters an order which will lock or cross the market.

3. (Original) The method of claim 1 further comprising determining if the order locks the market and, if the order locks the market, routing further comprises:

routing the formatted order to the market participant next in time whose quote would be locked if the quote is entered in the system.

4. (Original) The method of claim 3 further comprising;
executing the formatted order against the quote at the side of the market that would have been locked.

5. (Original) The method of claim 1 further comprising determining if the order crosses the market and, if the order crosses the market, routing further comprises:

routing the formatted order to the market participant next in time whose quote would be crossed if the quote is entered in the system.

6. (Previously Presented) The method of claim 3 further comprising executing the formatted order against the quote at the side of the market that would have been crossed.

Claim 7 is canceled.

Claim 8 is canceled.

9. (Previously Presented) The method of claim 1 wherein formatting the quote, formats the quote as the marketable limit order that is entered into the execution system as a marketable liability order.

10. (Previously Presented) The method of claim 1 wherein if quotes are entered in the electronic market at the opening of the market that would lock or cross other quotes in the market, using the method to clear out from the market the quotes that lock or cross the market before processing orders and quotes at the opening of the market.

11. (Currently Amended) A system for handling quotes in an electronic market comprises:

a lock/cross quote detector which determines whether a quote which is entered into the market system would lock or cross other quotes in the market system;

a quote formatter that receives the quote that, if entered, would lock or cross the market and reformats the quote as a marketable limit order;

a routing process that routes the formatted quote as a marketable limit formatted order to a market participant whose quote was locked or crossed; and
a process to determine if the formatted quote was filled by execution against the locked or crossed quote and if the formatted order was not filled,
the process to determine, reformats the formatted order as a displayable quote on the side of the market of the order.

12. (Original)The system of claim 11 wherein the routing process routes the formatted order to the market participant next in time whose quote would be crossed if the quote is entered into the system.

13. (Original)The system of claim 11 wherein the routing process routes the formatted order to the market participant next in time whose quote would be locked if the quote is entered into the system.

14. (Original)The system of claim 11 further comprising an execution process that executes the formatted order against the quote at the side of the market that would have been locked or crossed.

Claim 15 is canceled.

Claim 16 is canceled.

17. (Currently Amended) A computer program product residing on a computer readable medium for handling quotes in an electronic market comprises instructions to:

determine that a quote if entered, would lock or cross other quotes in the market; and
format the quote as a marketable liability order and route the order to a market participant whose quote was locked or crossed for execution in time priority;

determine whether the order was not filled and if the order was not filled, the product executes instructions to:

re-format the order as a displayable quote on the side of the market of the order.

18. (Previously Presented) The computer program product of claim 17 further comprising for a locked market instructions to:

route the market liability order to the market participant next in queue whom would be locked; and

execute the order at the price of the locked quote.

19. (Previously Presented) The computer program product of claim 17 further comprising for a crossed market instructions to:

route the order to the next market participants in queue; and

execute the order at the price of the displayed quote that was crossed.

Claim 20 is canceled.

21. (Previously Presented) The computer program product of claim 17 wherein instructions to re-format the quote, formats the quote as a marketable limit order that is entered into the execution system as the marketable liability order.

22. (Previously Presented) The computer program product of claim 17 wherein the program is executed at opening of the market to clear out quotes that lock or cross the market before processing orders and quotes at the opening of the market.
